

Push Branch to Main

Delivery_july_24_manasa -> main

Repo: https://github.com/Manasa08-manasa/Foodeez_delivery_app

Project folder: /Users/sell/Desktop/Foodeez_App_Folders/Foodeez_delivery_app

1. Open project folder

```
cd /Users/sell/Desktop/Foodeez_App_Folders/Foodeez_delivery_app
```

2. Check current status

Make sure you know which branch you are on and if files are saved.

```
git status  
git branch
```

3. Switch to your feature branch

```
git checkout Delivery_july_24_manasa
```

4. Get latest code from GitHub

```
git fetch origin  
git pull origin Delivery_july_24_manasa
```

5. Add and commit your changes (if any)

Only do this if you changed files and want to save them.

```
git add .  
git status  
git commit -m "Your commit message here"
```

6. Push your branch to GitHub

```
git push origin Delivery_july_24_manasa
```

7. Update local main first

Always update main before merging so you do not miss other people's work.

```
git checkout main
git pull origin main
```

8. Merge your branch into main

This brings Delivery_july_24_manasa changes into main.

```
git merge Delivery_july_24_manasa
```

9. If merge has conflicts

Git will show conflict files. Open those files, fix conflict markers, then:

```
git add .
git commit -m "Resolve merge conflicts from Delivery_july_24_manasa"
```

10. Push main to GitHub

```
git push origin main
```

11. Confirm everything

```
git status
git log --oneline -5
git branch
```

12. Go back to your working branch (optional)

```
git checkout Delivery_july_24_manasa
```

Full copy-paste flow (no conflicts case)

```
cd /Users/sell/Desktop/Foodeez_App_Folders/Foodeez_delivery_app

git checkout Delivery_july_24_manasa
git fetch origin
git pull origin Delivery_july_24_manasa

git add .
git commit -m "Your commit message here"
git push origin Delivery_july_24_manasa

git checkout main
git pull origin main
git merge Delivery_july_24_manasa
git push origin main

git checkout Delivery_july_24_manasa
```

Fast-forward only merge (safer)

Use this if you want Git to fail when a normal merge is needed (safer check).

```
git checkout main
git pull origin main
git merge --ff-only Delivery_july_24_manasa
git push origin main
```

Commands used earlier for Mani branch merge

These are the exact commands used to merge Mani_delivery_app_22july into main:

```
cd /Users/sell/Desktop/Foodeez_App_Folders/Foodeez_delivery_app
git fetch origin
git checkout main
git merge --ff-only origin/Mani_delivery_app_22july
git push origin main
```

Useful extra commands

```
# See remote branches
git branch -r

# See difference between your branch and main
git log --oneline main..Delivery_july_24_manasa

# Undo last local commit (keep files)
git reset --soft HEAD~1

# Discard local uncommitted file changes (careful)
git checkout -- <file>
```

Notes

1. Never force push to main unless you are sure (git push --force).
2. Commit on Delivery_july_24_manasa first, then merge into main.
3. Always pull main before merging.
4. After push, check GitHub: https://github.com/Manasa08-manasa/Foodeez_delivery_app
